1. Q — 
$$\int (\ln(x))^2 dx$$

A — Let 
$$u = (\ln(x))^2$$
 and  $v' = 1$ .

$$\frac{d}{dx}(\ln(x))^2 = 2\ln(x)\frac{d}{dx}\ln(x)$$

$$=\frac{2\ln(x)}{x}$$

Therefore  $u' = \frac{2\ln(x)}{x}$  and v = x

According to integration by parts:

$$\int uv' = uv - \int vu'$$

Therefore 
$$\int (\ln(x))^2 dx = x(\ln(x))^2 - 2 \int \ln(x) dx$$

To calculate 
$$\int \ln(x) dx$$
, let  $u = \ln(x)$  and  $v' = 1$ .

Therefore 
$$u' = \frac{1}{x}$$
 and  $v = x$ 

Therefore 
$$\int \ln(x)dx = x \ln(x) - \int 1dx$$

$$= x \ln(x) - x + C_1$$

Therefore 
$$\int (\ln(x))^2 dx = x(\ln(x))^2 - 2[x \ln(x) - x] + C$$

$$= x(\ln(x))^2 - 2x\ln(x) + 2x + C$$
