1. Q —
$$\int te^{-3t}dt$$

A — Let
$$u=t; v'=e^{-3t}$$
. Therefore $v=-\frac{1}{3}e^{-3t}$

According to integration by parts:

$$\int uv' = uv - \int vu'$$

Therefore
$$\int te^{-3t} dt = -t\frac{1}{3}e^{-3t} - \int -\frac{1}{3}e^{-3t} dx$$

$$= -\frac{t}{3}e^{-3t} + \frac{1}{3}\int e^{-3t}dx$$

$$= -\frac{t}{3}e^{-3t} - \frac{1}{9}e^{-3t} + C$$
